

Talk to Your Cameras

SENSEMAKER, Our Visual Intelligence Solution, powered by Vision Language Model (VLM)
Transforming every existing CCTV into an AI sensor, no coding required

3 X Winner:

OPEN INNOVATION PLATFORM

THE PROBLEM

Billions of hours. Almost none of it watched.

Surveillance footage is exploding | human attention can't keep up.

< 5%

of surveillance footage is ever reviewed

20 min

average attention span monitoring CCTV

Critical incidents are missed in real time as operators watch 50+ screens.

Rule-based video analytics create false alarms and still miss context.

Investigations take hours or days because video is not easily searchable.

What SENSEMAKER Does

Operators describe what they need in plain English. SENSEMAKER watches live and archived CCTV video, then give alerts when the prompt criteria is met.

“Alert me if anyone enters the loading dock after 10 pm”

Understands

Converts natural language into video analytics intent.

Watches

Analyses live + historical video across camera networks.

Alerts

Sends evidence clips, context and notification routing.

Works with existing CCTV

No AI engineers required

VLM R&D published

Enterprise deployment-ready

A US\$37B Market, Fast Growing

Video Intelligence market expanding at 21.5% CAGR.

Why Now — The Perfect Inflection Point

Four forces converging at once.

VLMs are ready

Vision Language Models have crossed the accuracy threshold for production. Research in 2023 & commercial infrastructure in 2026.

Real-time is now viable

Distillation, quantization and edge accelerators cut cost-per-stream; even as GPU prices climb. Per-camera analysis is now practical

Security demand surging

Rising operational risks and labor shortages are forcing enterprises to automate surveillance.

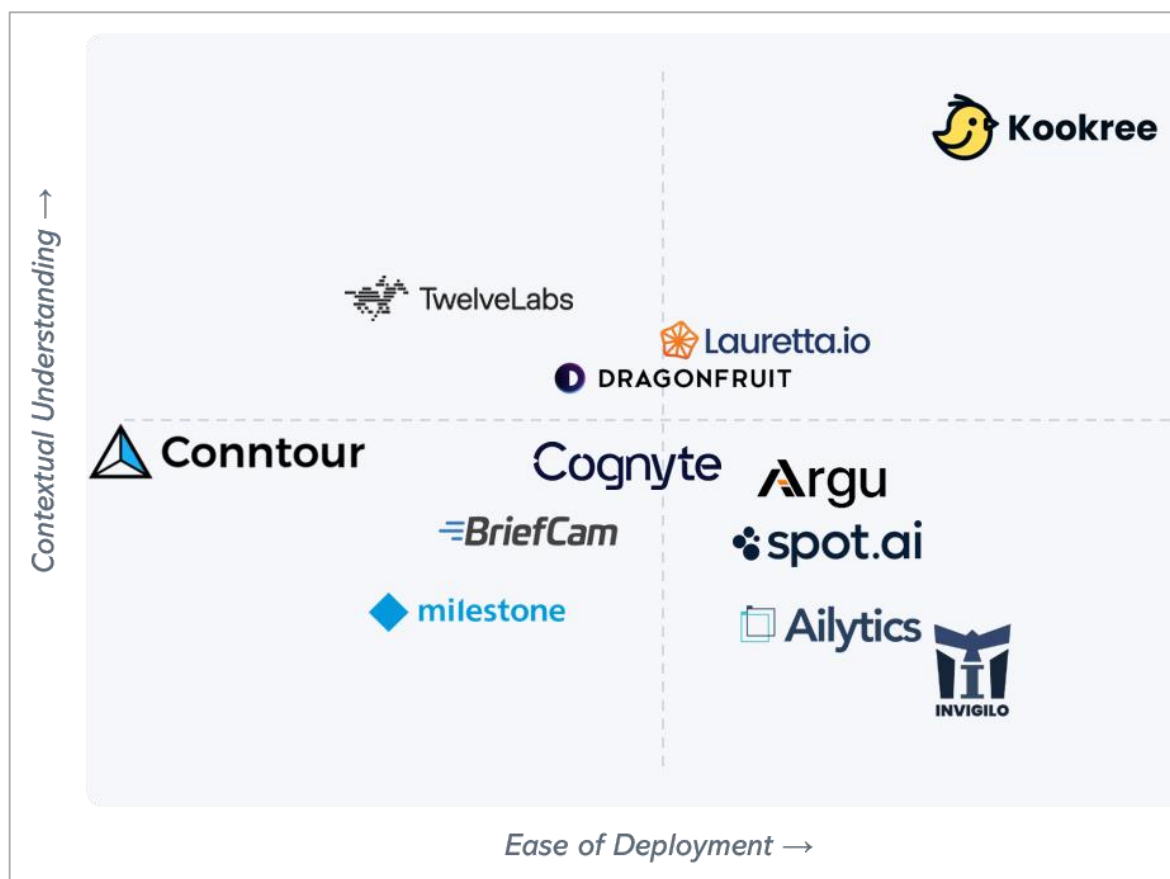

Cameras everywhere

1 billion+ CCTV installed worldwide. The infrastructure exists; what's missing is the AI layer.

POSITIONING

Why We Win

Differentiated on contextual understanding and ease of deployment.

Natural-language interface

Plain English, not rule configuration or coding.

Proprietary VLMs

Purpose-built models; not GPT/Claude wrappers.
Research published at International conference WACV & NeurIPS.

Plug & Play

Works with existing CCTV. No hardware swap.

Government-validated

Trusted and used by Singapore Government Agencies : A moat hard to replicate. Awarded direct contract (Waiver-of-Competition).

Create Value | Scale Value | Capture Value

*Defensible Technology
(Proprietary R&D)*

*Capital-efficient Growth
(Partner-led Expansion)*

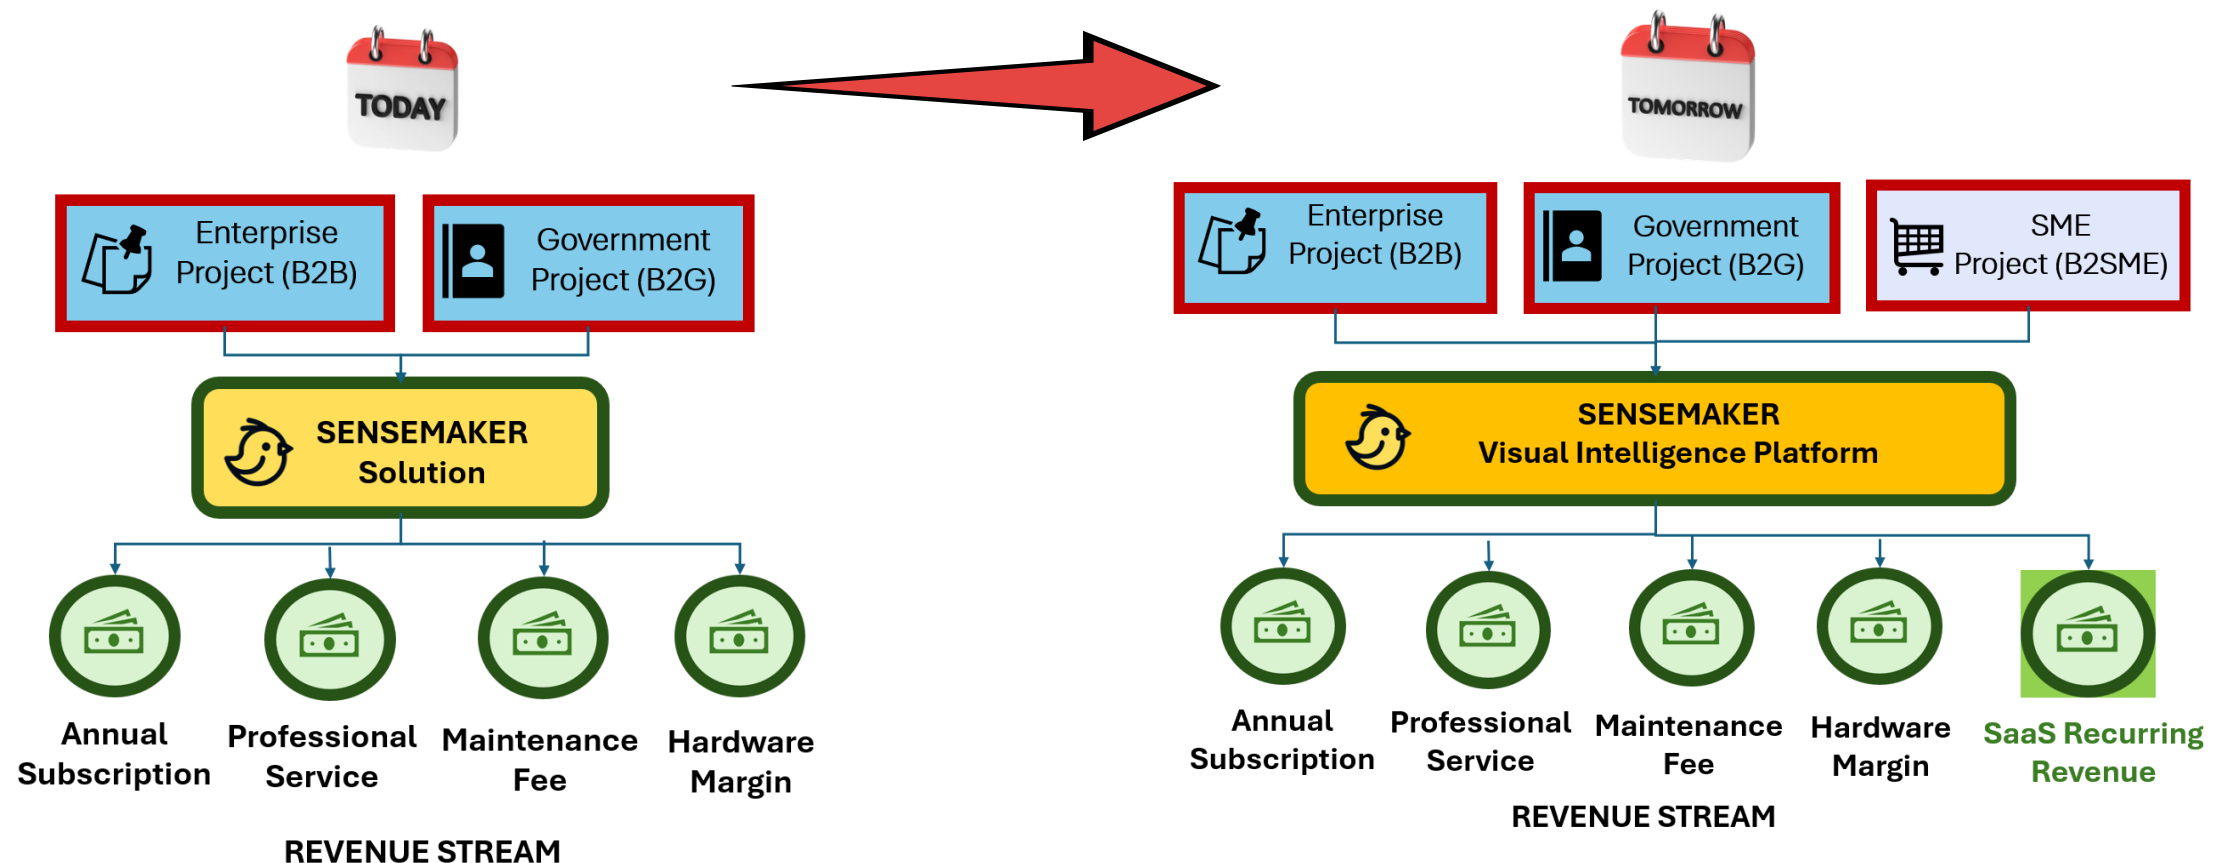

*Scalable Recurring Revenue
(Platform / SaaS model)*

Singapore (product-market fit) → regional expansion → platform business

From Projects to Platform

Transitioning to high-margin, recurring SaaS revenue.

TRACTION

Real Revenue, Real Customers

Validated across government & commercial sectors.

TEAM

Domain Experts with Founder-Market Fit

Deep operational intelligence meets technopreneurial execution.

Kelvin Kok PBM

CEO / Co-founder

Former Military Intelligence Officer. Technopreneur. Adjunct Lecturer at NTU. Combines deep operational intelligence with entrepreneurial experience.

Burhan Ul Tayyab

CTO / Co-founder

AI Architect & VLM expert. Developed AI for mission-critical systems. Computer Vision & Multimodal AI specialist. Published at WACV & NeurIPS.

Nicholas Chua

Head of AI / Co-founder

AI Engineering Leader. Drives end-to-end model development & deployment. Builds production-grade Vision AI optimized for real-time edge computing.
